## 1 Summary

GD32103C-EVAL uses GD32F103VCT6 as the main controller. It uses Mini USB interface or DC-005 connector to supply 5V power. SWD, Reset, Boot, User button key, LED, CAN, I2C, I2S, USART, RTC, LCD, SPI, ADC, DAC, EXMC, SDIO, USBD, GD-Link and Extension Pins are also included. For more details please refer to GD32103C-EVAL-V1.2 schematic.

## 3 Getting started

The EVAL board uses Mini USB connecter or DC-005 connector to get power DC +5V, which is the hardware system normal work voltage. A J-Link tool or GD-Link on board is necessary in order to download and debug programs. Select the correct boot mode and then power on, the LED1 will turn on, which indicates that the power supply is OK.

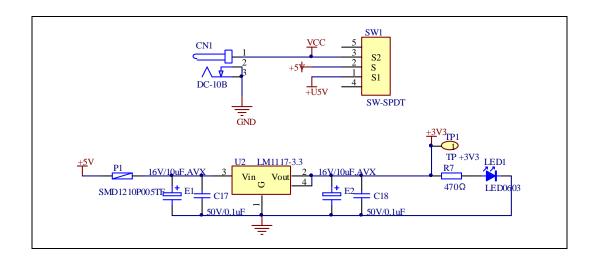

There are Keil version and IAR version of all projects. Keil version of the projects are created based on Keil MDK-ARM 4.74 uVision4. IAR version of the projects are created based on IAR Embedded Workbench for ARM 7.40.2. During use, the following points should be noted:

- 1. If you use Keil uVision4 to open the project, install the GD32F10x\_AddOn.2.0.0.exe to load the associated files.
- 2. If you use Keil uVision5 to open the project, there are two ways to solve the "Device Missing (s)" problem. One is to install GigaDevice.GD32F10x\_DFP.2.0.0.pack. In Project menu, select the Manage sub menu, click on the "Version Migrate 5 Format..." menu, the Keil uVision4 project will be converted to Keil uVision5 project. Then add "C:\Keil\_v5\ARM\Pack\ARM\CMSIS\4.2.0\CMSIS\Include" to C/C++ in Option for Target. The other is to install Addon directly. Select the installation directory of Keil uVision5 software, such as C:\Keil\_v5, in Destination Folder of Folder Selection. Select the corresponding device in Device of Option for **Target** and add "C:\Keil\_v5\ARM\Pack\ARM\CMSIS\4.2.0\CMSIS\Include" to C/C++ in Option for Target. 3. If you use IAR to open the project, install IAR GD32F10x ADDON.2.0.0.exe to load the associated files.

## 5.1 **GPIO\_Runing\_Led**

## 5.1.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED
- Learn to use SysTick to generate 1ms delay

GD32103C-EVAL board has four LEDs. The LED2, LED3, LED4 and LED5 are controlled by GPIO. This demo will show how to light the LEDs.

#### 5.1.2 DEMO Running Result

Download the program <01\_GPIO\_Runing\_Led> to the EVAL board, LED2, LED3, LED4, LED5 will turn on in sequence with interval of 200ms, and turn off together, 200ms later, repeat the process.

#### 5.2 **GPIO\_Keyboard\_Polling\_mode**

## 5.2.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED and the KEY
- Learn to use SysTick to generate 1ms delay

GD32103C-EVAL board has four keys and four LEDs. The four keys are Reset key, Tamper key, Wakeup key and User key. The LED2, LED3, LED4 and LED5 are controlled by GPIO.

This demo will show how to use the Tamper key to control the LED2. When press down the Tamper Key, it will check the input value of the IO port. If the value is 0 and will wait for 50ms. Check the input value of the IO port again. If the value still is 0, it indicates that the button is pressed successfully and toggle LED2.

## 5.2.2 DEMO Running Result

Download the program <02\_GPIO\_KeyBoard\_Polling\_mode> to the EVAL board, press down the Tamper Key, LED2 will be turned on. Press down the Tamper Key again, LED2 will be turned off.

## 5.3 GPIO\_KeyBoard\_Interrupt\_mode

## 5.3.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED and the KEY
- Learn to use EXTI to generate external interrupt

GD32103C-EVAL board has four keys and four LEDs. The four keys are Reset key, Tamper key, Wakeup key and User key. The LED2, LED3, LED4 and LED5 are controlled

by GPIO.

This demo will show how to use the EXTI interrupt line to control the LED2. When press down the Tamper Key, it will produce an interrupt. In the interrupt service function, the demo will toggle LED2.

#### 5.3.2 DEMO Running Result

Download the program <03\_GPIO\_KeyBoard\_Interrupt\_mode> to the EVAL board, Press down the Tamper Key, LED2 will be turned on. Press down the Tamper Key again, LED2 will be turned off.

#### 5.4 USART\_Printf

#### 5.4.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED
- Learn to retarget the C library printf function to the USART

## 5.4.2 **DEMO Running Result**

Download the program < 04\_USART\_Printf > to the EVAL board, connect serial cable to EVAL\_COM0. This implementation outputs "USART printf example: please press the Tamper key" on the HyperTerminal using EVAL\_COM0. Press the Tamper key, serial port will output "USART printf example".

The output information via the serial port is as following.

USART printf example: please press the Tamper key
USART printf example

## 5.5 USART\_Echo\_Interrupt\_mode

## 5.5.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

■ Learn to use the USART transmit and receive interrupts to communicate with the serial terminal tool

#### 5.5.2 DEMO Running Result

Download the program < 05\_USART\_Echo\_Interrupt\_mode > to the EVAL board, connect serial cable to EVAL\_COM0. Firstly, all the LEDs are turned on and off for test. Then, the EVAL\_COM0 sends the tx\_buffer array (from 0x00 to 0xFF) to the serial terminal tool supporting hex format communication and waits for receiving data of BUFFER\_SIZE bytes from the serial terminal. The data MCU has received is stored in the rx\_buffer array. After that, compare tx\_buffer with rx\_buffer. If tx\_buffer is same with rx\_buffer, LED2, LED3, LED4, LED5 flash by turns. Otherwise, LED2, LED3, LED4, LED5 toggle together.

The output information via the serial port is as following.

#### 5.6 USART\_DMA

## 5.6.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

Learn to use the USART transmit and receive data using DMA

## 5.6.2 DEMO Running Result

Download the program < 06\_USART\_DMA > to the EVAL board, connect serial cable to EVAL\_COM0. Firstly, all the LEDs are turned on and off for test. Then, the EVAL\_COM0 sends the tx\_buffer array (from 0x00 to 0xFF) to the serial terminal tool supporting hex format communication and waits for receiving data of same bytes as tx\_buffer from the serial terminal. The data MCU have received is stored in the rx\_buffer array. After that, compare tx\_buffer with rx\_buffer. If tx\_buffer is same with rx\_buffer, LED2, LED3, LED4, LED5 flash by turns. Otherwise, LED2, LED3, LED4, LED5 toggle together.

#### 5.7 ADC\_Temperature\_Vrefint

#### 5.7.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to get the value of inner channel 16(temperature sensor channel) and channel 17 (VREFINT channel)

#### 5.7.2 DEMO Running Result

Download the program <07\_ADC\_Temperature\_Vrefint> to the GD32103C-EVAL board. Connect serial cable to EVAL\_COM0, open the HyperTerminal.

When the program is running, HyperTerminal display the value of temperature and internal voltage reference (VREFINT).

Notice: because there is an offset, when inner temperature sensor is used to detect accurate temperature, an external temperature sensor part should be used to calibrate the offset error.

```
the temperature data is 37 degrees Celsius the reference voltage data is 1.180V

## 5.8 ADC0\_ADC1\_Follow\_up\_mode

## 5.8.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to use ADC0 and ADC1 follow-up mode

#### 5.8.2 DEMO Running Result

Download the program <08\_ADC0\_ADC1\_Follow\_up\_mode> to the GD32103C-EVAL board. Connect serial cable to EVAL\_COM0, open the HyperTerminal. PC3 and PC5 pin voltage access by external voltage.

TIMER0\_CH0 is the trigger source of ADC0 and ADC1. When the rising edge of TIMER0\_CH0 coming, ADC0 starts immediately and ADC1 starts after a delay of several ADC clock cycles. The values of ADC0 and ADC1 are transmitted to array adc\_value[0] and adc\_value[1] by DMA.

When the first rising edge of TIMER0\_CH0 coming, the value of the ADC0 conversion of PC3 pin is stored into the low half word of adc\_value[0], and after a delay of several ADC clock cycles the value of the ADC1 conversion of PC5 pin is stored into the high half word of adc\_value[0]. When the second rising edge of TIMER0\_CH0 coming, the value of the ADC0 conversion of PC5 pin is stored into the low half word of adc\_value[1], and after a delay of several ADC clock cycles the value of the ADC1 conversion of PC3 pin is stored into the high half word of adc\_value[1].

When the program is running, HyperTerminal display the regular value of ADC0 and ADC1 by adc\_value[0] and adc\_value[1].

```
the data adc_value[0] is OFFC03E5
the data adc_value[1] is O3E50FFC
the data adc_value[0] is OFFDO3E3

#### 5.9 ADC0\_ADC1\_Regular\_Parallel\_mode

#### 5.9.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to use ADC0 and ADC1 regular parallel mode

#### 5.9.2 DEMO Running Result

Download the program <09\_ADC0\_ADC1\_Regular\_Parallel\_mode> to the GD32103C-EVAL board. Connect serial cable to EVAL\_COM0, open the HyperTerminal. PC3 and PC5 pin connect to external voltage input.

TIMER0\_CH0 is the trigger source of ADC0 and ADC1. When the rising edge of TIMER0\_CH0 coming, ADC0 and ADC1 convert the regular channel group parallelly. The values of ADC0 and ADC1 are transmitted to array adc\_value[0] and adc\_value[1] by DMA.

When the first rising edge of TIMER0\_CH0 coming, the value of the ADC0 conversion of PC3 pin is stored into the low half word of adc\_value[0], the value of the ADC1 conversion of PC5 pin is stored into the high half word of adc\_value[0]. #### 5.10 DAC\_Output\_Voltage\_Value

#### 5.10.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

Learn to use DAC to output voltage on DAC0 output

## 5.10.2 DEMO Running Result

Download the program <10\_DAC\_Output\_Voltage\_Value> to the EVAL board and run, all the LEDs will turn on and turn off for test. The digital value is 0x7FF0, its converted analog voltage should be 1.65V (VREF/2), using the voltmeter to measure PA4 or DA1 on JP7, its value is 1.65V.

## 5.11 I2C\_EEPROM

## 5.11.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

■ Learn to use the master transmitting mode of I2C module

- Learn to use the master receiving mode of I2C module
- Learn to read and write the EEPROM with I2C interface

#### 5.11.2 **DEMO** Running Result

Download the program <11\_I2C\_EEPROM> to the EVAL board and run. Connect serial cable to COM0, and open the HyperTerminal to show the print message.

Firstly, the data of 256 bytes will be written to the EEPROM from the address 0x00 and printed by the serial port. Then, reading the EEPROM from address 0x00 for 256 bytes and the result will be printed. Finally, compare the data that were written to the EEPROM and the data that were read from the EEPROM. If they are the same, the serial port will output "I2C-AT24C02 test passed!" and the four LEDs lights flashing, otherwise the serial port will output "Err: data read and write aren't matching." and all the four LEDs light.

The output information via the serial port is as following.

#### 5.12 SPI\_SPI\_Flash

#### 5.12.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

 Learn to use the master mode of SPI unit to read and write NOR Flash with the SPI interface

#### 5.12.2 **DEMO Running Result**

The computer serial port line connected to the COM0 port of development board, set the baud rate of HyperTerminal software to 115200, 8 bits data bit, 1 bit stop bit. At the same time you should jump the JP12 to SPI.

Download the program <12\_SPI\_SPI\_Flash> to the EVAL board, the HyperTerminal software can observe the operation condition and will display the ID of the flash, 256 bytes data which are written to and read from flash. Compare the data that were written to the flash and the data that were read from the flash. If they are the same, the serial port will output "SPI-GD25Q16 Test Passed!", otherwise, the serial port will output "Err: Data Read and Write aren't Matching.". At last, turn on and off the leds one by one. The following is the experimental results.

## 5.13 I2S Audio Player

## 5.13.1 DEMO Purpose

This Demo includes the following functions of GD32 MCU:

- Learn to use I2S module to output audio file
- Parsing audio files of wav format

GD32103C-EVAL board integrates the I2S (Inter-IC Sound) module, and the module can communicate with external devices using the I2S audio protocol. This Demo mainly shows how to use the I2S interface of the board for audio output.

## 5.13.2 DEMO Running Result

Download the program<13\_I2S\_Audio\_Player>to the EVAL board, insert the headphone into the audio port, and then listen to the audio file.

#### 5.14 EXMC\_NandFlash

#### 5.14.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

■ Learn to use EXMC control the NAND flash

#### 5.14.2 **DEMO Running Result**

GD32103C-EVAL board has EXMC module to control NAND flash. Before running the demo, P2 and P3 must be fitted to the EXMC port, JP24 must be fitted to the Nand port. Download the program <14\_EXMC\_NandFlash> to the EVAL board. This demo shows the write and read operation process of NAND flash memory by EXMC module. If the test pass, LED2 will be turned on. Otherwise, turn on the LED4. Information via a HyperTerminal output as following:

NAND flash initialized! Read NAND ID! Nand flash ID:0xAD 0xF1 0x80 0x1D

#### 5.15 EXMC\_TouchScreen

#### 5.15.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

■ Learn to use EXMC control LCD

## 5.15.2 **DEMO** Running Result

GD32103C-EVAL board has EXMC module to control LCD. Before running the demo, JP12 must be fitted to the SPI port, P2 and P3 must be fitted to the EXMC port, JP24 must be fitted to the Lcd port. Download the program <15\_EXMC\_TouchScreen> to the EVAL board. This demo displays GigaDevice logo and four green buttons on the LCD screen by EXMC module. Users can touch the green button to turn on the corresponding LED on board, and then the color of button you had touched will change to red.

### 5.16 SDIO\_SDCardTest

## 5.16.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

Learn to use SDIO to single block or multiple block write and read

Learn to use SDIO to erase, lock and unlock a SD card

GD32103C-EVAL board has a secure digital input/output interface (SDIO) which defines the SD/SD I/O /MMC CE-ATA card host interface. This demo will show how to use SDIO to operate on SD card.

#### 5.16.2 **DEMO Running Result**

Download the program <16\_SDIO\_SDCardTest> to the EVAL board and run. Connect serial cable to EVAL\_COM0, open the HyperTerminal. Firstly, all the LEDs flash once for test. Then initialize the card and print out the information of the card. After that, test the function of single block operation, lock and unlock operation, erase operation and multiple blocks operation. If any error occurs, print the error message and turn on LED2, LED4 and turn off LED3 and LED5. Otherwise, turn on all the LEDs.

Uncomment the macro DATA\_PRINT to print out the data and display them through HyperTerminal. Set bus mode(1-bit or 4-bit) and data transfer mode(polling mode or DMA mode) by comment and uncomment the related statements.

Information via a serial port output as following.

```
Card init success!
Card information:
## Card version 3.0x ##
## SDHC card ##
## Device size is 7761920KB ##
## Block size is 512B ##
## Block count is 15523840 ##
## CardCommandClasses is: 5b5 ##
## Block operation supported ##
## Erase supported ##
## Lock unlock supported ##
## Application specific supported ##
## Switch function supported ##
 Card test:
 Block write success!
 Block read success!
 The card is locked!
 Erase failed!
 The card is unlocked!
 Erase success!
 Block read success!
 Multiple block write success!
 Multiple block read success!
```

#### 5.17 CAN\_Network

## 5.17.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

■ Learn to use the CAN0 communication between two boards

GD32103C-EVAL development board integrates the CAN(Controller Area Network) bus controller, which is a common industrial control bus. CAN bus controller follows the CAN bus protocol of 2.0 A and 2.0 B. This demo mainly shows how to communicate two EVAL boards through CAN0.

#### 5.17.2 DEMO Running Result

This example is tested with two GD32103C-EVAL boards. Jump the P2, P3 to CAN with the jumper cap. Connect L pin to L pin and H pin to H pin of JP14 on the boards for sending and receiving frames. Download the program <17\_CAN\_Network> to the two EVAL boards, and connect serial cable to EVAL\_COM0. Firstly, the EVAL\_COM0 sends "please press the Tamper key to transmit data!" to the HyperTerminal. The frames are sent and the transmit data are printed by pressing Tamper Key push button. When the frames are received, the receive data will be printed and the LED2 will toggle one time. The output information via the serial port is as following.

please press the Tamper key to transmit data!

CANO transmit data: ab,cd

CAN0 receive data: ab,cd

#### 5.18 RCU Clock Out

#### 5.18.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED
- Learn to use the clock output function of RCU
- Learn to communicate with PC by USART

#### 5.18.2 DEMO Running Result

Download the program <18\_RCU\_Clock\_Out> to the EVAL board and run. Connect serial cable to EVAL\_COM0, open the HyperTerminal. When the program is running, HyperTerminal will display the initial information. Then user can choose the type of the output clock by pressing the TAMPER button. After pressing, the corresponding LED will be turned on and HyperTerminal will display which mode be selected. The frequency of the output clock can be observed through the oscilloscope by PA8 pin.

Information via a serial port output as following:

```

CK_OUTO: IRC8M
CK_OUTO: HXTAL

#### 5.19 PMU\_sleep\_wakeup

#### 5.19.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

■ Learn to use the USART receive interrupt to wake up the PMU from sleep mode

## 5.19.2 **DEMO Running Result**

Download the program < 19\_PMU\_sleep\_wakeup > to the EVAL board, connect serial cable to EVAL\_COM0. After power-on, all the LEDs are off. The MCU will enter sleep mode and the software stop running. When the USART0 receives a byte of data from the HyperTerminal, the MCU will wake up from a receive interrupt. And all the LEDs will flash together.

#### 5.20 RTC Calendar

#### 5.20.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use RTC module to implement calendar and alarm function
- Learn to use USART module to implement time display

## 5.20.2 DEMO Running Result

Download the program <20\_RTC\_Calendar> to the EVAL board and run. Connect serial cable to EVAL\_COM0, open the HyperTerminal. After start-up, the program will ask to set the time on the HyperTerminal. The calendar will be displayed on the HyperTerminal. At the same time, set current time add 10 second as alarm time. After 10 second, the alarm note will be displayed on the HyperTerminal and turn on LEDs.

### 5.21 TIMER\_Breath\_LED

#### 5.21.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use Timer output PWM wave
- Learn to update channel value

#### 5.21.2 DEMO Running Result

Use the DuPont line to connect the TIMER0\_CH0 (PA8) and LED2 (PC0), and then download the program <21\_TIMER\_Breath\_LED> to the GD32103C-EVAL board and run. PA8 should not be reused by other peripherals.

When the program is running, you can see LED2 lighting from dark to bright gradually and then gradually darken, ad infinitum, just like breathing as rhythm.

#### 5.22 USBD CDC ACM

## 5.22.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn how to use the USBD peripheral
- Learn how to implement USB CDC device

GD32103C-EVAL board has one USBD interface. In this demo, the GD32103C-EVAL board is enumerated as an USB virtual COM port, which was shown in device manager of PC as below. This demo makes the USB device look like a serial port, and loops back the contents of a text file over USB port. To run the demo, input a message using the PC's keyboard. Any data that shows in HyperTerminal is received from the device.

#### 5.22.2 DEMO Running Result

Download the program <22\_CDC\_ACM> to the EVAL board and run. When you input message through computer keyboard, the HyperTerminal will receive and shown the message. For example, when you input "GigaDevice MCU", the HyperTerminal will get and show it as below.

## 5.23 USBD\_MSC\_internal\_flash

## 5.23.1 DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn how to use the USBD
- Learn how to implement USB MSC(mass storage) device

This demo mainly implements a U disk. U disk is currently very widely used removable MSC devices. MSC, the Mass Storage device Class, is a transport protocol between a

computer and mobile devices, which allow a universal serial bus (USB) equipment to access a host computing device, file transfer between them, mainly including mobile hard disk, mobile U disk drive, etc. The MSC device must have a storage medium, and this Demo uses the MCU's internal SRAM as the storage medium. For more details of the MSC protocol please refer to the MSC protocol standard.

MSC device will use a variety of transport protocols and command formats for communication, so it need to choose the appropriate protocol and command format in the realization of the application. This Demo selects the BOT (bulk only transport) protocol and the required SCSI (small computer interface) command, and is compatible with a wide variety of Window operating systems. Specific BOT protocol and SCSI command specification please refer to the standard of their agreement.

#### 5.23.2 DEMO Running Result

Download the program < 23\_USBD\_MSC\_internal\_flash> to the EVAL board and run. When the EV-board connect to the PC, you will find a USB large capacity storage device is in the universal serial bus controller, and there is 1 more disk drives in the equipment manager of PC.

Then, after opening the resource manager, you will see more of the 1 disk, as shown in the following diagram:

At this point, the write/read/formatting operation can be performed as the other mobile devices.
